II. Objectives and Procedures	2
III. Individual Profiles of Communities and Population Categories	3
Statewide Summary	6
Communities of 300 - 500 Population	7
Communities of 501 - 1,000 Population	38
Communities of 1,001 - 5,000 Population	95
Communities of 5,001 - 10,000 Population	189
Communities of 10,001 - 20,000 Population	201
Communities of 20,001 - 50,000 Population	209
Communities of 50,000 + Population	217
I V. Relationship of Standards to Needs	224
General	224
Specific Facilities	231

## I. INTRODUCTION

In 1973, a survey of outdoor recreation areas and facilities of Montana cities and towns was conducted under the auspices of the State of Montana Fish and Game Department. It was designed to inventory existing areas and facilities of those cities and towns so that the Department of Fish and Game would be better able to systematically and objectively determine need for additional facilities and renovation of existing ones. Additional criteria for use in determination of the need for financial assistance was later established with the development of interim areas and facilities standards for communities by the Department's working in cooperation with professional recreation staff from across the state.

Thus, the Department had at its disposal an inventory of all existing outdoor recreation areas and facilities within Montana communities, along with a set of standards by which to compare and contrast the various communities regarding equitable distribution of recreation resources. What was not yet available to them was a documentation of the needs, interests and attitudes of the people of these communities toward available recreational resources. Such documentation would provide the Department with additional necessary information to be used in the determination of priorities for equitable and worthwhile allocation of available financial assistance. Thus, it was for the expressed purposes of determining the recreational needs and interests of the communities, and determining community attitudes toward present and future recreational areas and facilities that this study was undertaken.

## II. OBJECTIVES AND PROCEDURES

The specific objective of this project was to determine urban outdoor recreation needs, interests and attitudes of residents in Montana communities having a population of three hundred or more. A secondary objective was to identify citizen attitude toward the interim areas and facilities standards established by the Department of Fish and Game in 1973.

In August and September of 1974, an urban outdoor recreation areas and facilities survey was conducted among 7,994 randomly sampled residences throughout the state of Montana. All cities and towns with a population of three hundred or more (N=102) were included in the survey. Those cities and towns were separated into seven categories according to population with each being subjected to a slightly different sampling percentage. This was undertaken primarily to ensure significant numbers of responses from the less populated communities. Table 1 shows the population categories with the sampling percentages and the number of residences included in the sample.

TABLE I  
POPULATION CATEGORIES AND SAMPLING DATA

Population Category	No. of cities and towns	sample percentage	No. of residences in sample
300-500	(N=15)	25%	554
501-1000	(N=28)	15%	1170
1001-5000	(N=46)	10%	3490
5001-10,000	(N=5)	5%	660
10,001- 20,000	(N=3)	4%	530
20,001-50,000	(N=3)	3%	760
50,001+	(N=2)	2%	830
TOTAL	(N=102)		7994

The survey requested information in five specific areas: 1) demographic data (age, sex, and residence), 2) frequency of use of facilities, 3) perception of the condition of existing facilities, 4) perceived priorities for construction or renovation, 5) perceived relationship of standards to community needs.

Computerized techniques were used to tabulate the data and derive percentages for each of the five areas, and percentage tables were used in this report to describe the questionnaire response for each individual city and town. The cities and towns were grouped according to population categories for additional comparisons.

The part of the questionnaire regarding the acceptability of standards was treated separately according to population categories only, rather than by individual city or town. Statewide totals were also included in the data tabulation of this part of the questionnaire.

### III. INDIVIDUAL PROFILES OF COMMUNITIES

#### AND POPULATION CATEGORIES

Of the 7,994 residences sampled in the survey, questionnaires were received from 1,109. This is a return of 13.9%. This total represents 0.8% of the total number of residences in the surveyed communities (N=133,420). In total, 2245 completed questionnaires were received from these residences representing 0.6% of the total population in the surveyed communities (N=400,730). Data describing the survey response according to population categories are shown in Table 2.

TABLE 2  
SURVEY RESPONSE ACCORDING TO POPULATION CATEGORIES

Population Category	Survey Representation			State Representation	
	Sample Respondents	Residences		Population	Residences
300 - 500	554	194	91 (16.4%)	5,715 (3.4%)	1,897 (4.8%)
501 - 1000	1170	332	152 (13.0%)	20,410 (1.6%)	6,736 (2.3%)
1001 - 5000	3490	937	468 (13.4%)	99,075 (1.0%)	32,994 (1.4%)
5001 - 10,000	660	178	86 (13.0%)	38,419 (0.5%)	12,787 (0.7%)
10,001 - 20,000	530	170	83 (15.7%)	39,754 (0.4%)	13,251 (0.6%)
20,001 - 50,000	760	192	104 (13.7%)	75,595 (0.3%)	25,198 (0.4%)
50,001 +	830	242	125 (15.1%)	121,762 (0.2%)	40,557 (0.3%)
total	7994	2245	1109 (13.9%)	400,730 (0.6%)	133,420 (0.8%)

Respondents to the survey showed a distribution of 1,240 males and 1,005 females. There was a considerably larger number of respondents in the older age groups in comparison with the younger age groups. Age 55+ accounted for 24.0% (N=541) of the respondents; age 31-54 was 33.6% (N=755); age 19-30 was 20.4% (N=457); age 13-18 was 11.1% (N=249); and age 1-12 was 10.8% (N=243). Table 3 shows the number of respondents to the survey according to sex and age.

## \* Key to Population Categories

- A. 300 - 500 pop.
- B. 501 - 1000 pop.
- C. 1001 - 5000 pop.
- D. 5001 - 10,000 pop.
- E. 10,001 - 20,000 pop.
- F. 20,001 - 50,000 pop.
- G. 50,001 +
- H. Total

The majority of the respondents-71.2% (N=1597)-were from within the city limits, 16.5% (N=371) were from within four miles of the city limits, and 12.1% (N=272) were from greater than four miles of the city limits. There were five no responses. Table 4 shows the distribution of respondents according to residence.

TABLE 4  
DISTRIBUTION OF RESPONDENTS ACCORDING TO RESIDENCE

Population Category	Within City Limits	4 Miles from City Limits	Greater than 4 Miles From City
300 - 500	118	28	44
501 - 1000	203	41	87
1001 - 5000	695	147	95
5001 - 10,000	124	37	17
10,001 - 20,000	120	33	17
20,001 - 50,000	131	51	10
50,001 +	206	34	2
Total	1,597 (71.2%)	371 (16.5%)	272 (12.1%)

The most used (rank order) areas and facilities on a statewide basis were parks, swimming pools, golf courses, and playgrounds. Least used (rank order) areas and facilities were wading pools, recreational bikeways, and basketball/volleyball courts. Those areas and facilities perceived as most satisfactory were parks, playgrounds, softball fields, baseball fields, and athletic fields, while least satisfactory ones were swimming pools and tennis courts. Top priority items for construction or renovation were swimming pools, parks and playgrounds. Those receiving most response as no priority items were golf courses, motorcycle trail areas, baseball fields and athletic fields. A relatively high percentage of no response answers ranging from 24% to 37% were received in regard to the questionnaire. This accounts for the low percentages shown in the profiles of the state summary. The statewide response to the questionnaire is summarized in profile in Table 5.

TABLE 5  
PROFILE: MONTANA CITIES AND TOWNS (N=102)

<u>Description of Respondents</u>					
<u>Age</u>	<u>Male</u>	<u>Female</u>	<u>Total</u>	<u>Residence</u>

Baseball fields	19.0%	18.4%	16.0%	11.3%	35.3%
Softball fields	19.5%	18.1%	14.3%	11.6%	36.5%
Wading pools	24.8%	15.6%	12.2%	11.7%	35.6%
Swimming pools	44.1%	9.2%	12.2%	5.7%	28.7%
Parks	38.1%	13.9%	11.5%	5.6%	30.9%
Playgrounds	34.6%	14.9%	11.2%	7.1%	32.2%
Recreational bikeways	28.9%	15.9%	9.5%	13.2%	32.5%
Hiking-walking trails	21.7%	17.1%	12.5%	13.4%	35.3%
Golf courses	12.7%	15.1%	17.5%	19.8%	34.7%
Motorcycle trail areas	14.3%	13.8%	16.3%	20.3%	35.1%

The state summary was treated by subdividing it into the various population categories and presenting the data in an identical profile to that presented immediately heretofore. The individual population categories were further analyzed by presenting profiles for each individual community in the category.

#### Communities of 300-500 Population

Ninety-one residences and one hundred and ninety-four residents from fifteen communities responded to the survey from this population category, representing a return of 16.4%. Of the returned questionnaires, one hundred and eighteen (60.8%) were from within the city limits, twenty eight (14.4%) were from within 4 miles of the city limits, forty-four (22.7%) were from greater than four miles of the city limits, and four (2.1%) did not complete the question. One hundred and twenty-two respondents were males and seventy-two were females.

Swimming pools (908 visits) were the most used facilities for this size community, followed by parks (449 visits), basketball/volleyball courts (349 visits), and open space/athletic fields (314 visits).

This popularity was also reflected in the question on priority for reconstruction or renovation. 49.5% of the respondents assigned top priority to the construction of swimming pools, followed by parks (39.7%) and playgrounds (35.6%). Motorcycle trail areas received the largest no priority response (16%). Parks, athletic fields, softball fields and baseball fields, in that order, were perceived as the most satisfactory regarding the general condition of the facility. No trend emerged regarding unsatisfactory general conditions of the facilities. This data is summarized in Table 6.

TABLE 6

## PROFILE: COMMUNITIES OF 300-500 POPULATION (N=15)

<u>Description of Respondents</u>

Motorcycle trail areas	16.0%	8.8%	16.0%	17.0%	42.3%

Individual communities within this population category have been treated in a similar manner on the following pages. They are presented in alphabetical order and include:

1. Alberton
2. Brockton
3. Denton
4. Drummond
5. Dutton
6. Froid
7. Fromberg
8. Geraldine
9. Hysham
10. Joliet
11. Lima
12. Medicine Lake
13. Opheim
14. Richey
15. Saco

Alberton (pop. 363)

Nine residences and thirteen residents responded to the survey from Alberton. This is a return of 22.5% and represents 3.6% of the population of that community. Of the returned questionnaires, ten (76.9%) were from within the city limits, one (7.7%) was from within four miles of the city limits, and there were two no responses. Eight respondents were male and five were female.

The most used facilities for this community were basket/volleyball courts (34 visits), softball fields (24 visits), and parks (24 visits). The most satisfactory facilities in terms of general condition were softball fields (28.5%) and hiking-walking trails (30.8%). Those perceived as being most unsatisfactory were openspace/athletic fields (23.1%) and tennis courts (23.1%). Swimming pools (46.2%), parks (46.2%), and golf courses (30.8%) received top priority for construction or renovation while motorcycle trail areas (53.8%) headed the list of no priority items. A profile of this data for the community of Alberton is presented in Table 7.

TABLE 7  
PROFILE: ALBERTON (pop. 363)

<u>Description of Respondents</u>

Brockton (pop. 401)

Twenty-four residences were sampled in this community. No responses were received.

Denton (pop. 398)

Thirteen residences and thirty-three residents responded to the survey from Denton. This is a return of 32.5% and represents 8.3% of the population. Of the return questionnaires, eighteen (54.6%) were from within the city limits, four (12.1%) were from within four miles of the city limits, and eleven (33.3%) were from greater than four miles of the city limits. Nineteen respondents were male and fourteen were female.

The most used facilities for this community were swimming pools (94 visits), motorcycle trail areas (74 visits) and parks (66 visits). The most satisfactory facilities in terms of general condition were softball fields (63.6%) and baseball fields (60.6%). Those perceived as being most unsatisfactory were parks (15.2%) and playgrounds (15.1%). Swimming pools (45.5%) and playgrounds (36.4%) received top priority for construction or renovation while hiking-walking trails (18.2%) and parks (12.1%) headed the list of no priority items. A profile of this data for the community of Denton is presented in Table 8.

Drummond (pop. 494)

Four residences and nine residents responded to the survey from Drummond. This is a return of 0.8% and represents 1.8% of the population. Of the returned questionnaires, three (33.3%) were from within the city limits, and six (66.7%) were from within four miles of the city limits. Six respondents were male and three respondents were females.

The only facilities shown to be used in this community were parks (6 visits). The most unsatisfactory facilities in terms of general condition were parks and playgrounds. Most facilities were unavailable in the community. Swimming pools (88.9%) and tennis courts (44.4%) received top priority for construction or renovation while motorcycle trail areas (22.2%) headed the list of no priority items. A profile of this data for the community of Drummond is presented in Table 9.

Dutton (pop. 415)

Nine residences and twenty-five residents responded to the survey from Dutton. This is a return of 22.5% and represents 6.2% of the population. Nineteen (76.0%) were from within the city limits, four (16.0%) were from within four miles of the city limits, and two (4.0%) were from greater than four miles of the city limits. Fifteen respondents were male and ten respondents were female.

The most used facilities for this community were swimming pools (270 visits) and basket/volleyball courts (241 visits). The most satisfactory facilities in terms of general condition were basket/volleyball courts and tennis courts (76.0%). Those perceived as being most unsatisfactory were swimming pools (40.0%) and parks (16.0%). Swimming pools (48.0%) and parks (48.0%) received top priority for construction or renovation while basket/volleyball courts, athletic fields, softball fields and wading pools (32.0%) headed the list of no priority items. A profile of this data for the community of Dutton is presented in Table 10.

Fromberg (pop. 364)

Three residences and five residents responded to the survey from Fromberg. This is a return of 7.5% and represents 1.4% of the population. Of the returned questionnaires, five (100%) were from within the city limits. Three respondents were male and two were female. Due to the small return, the data has little value and is presented for reference in tabular form only.

A profile of this data for the community of Fromberg is presented in Table 12.

Geraldine (pop. 370)

Six residences and eleven residents responded to the survey from Geraldine. This is a return of 15.0% and represents 3.3% of the population. Of the returned questionnaires, ten (90.9%) were from within the city limits, and one (9.1%) was from greater than four miles of the city limits. Seven respondents were male and four were female.

The most used facilities for this community were softball fields (14 visits) and parks (8 visits). The most satisfactory in terms of general condition were open space/athletic fields (72.7%). Those perceived as being most unsatisfactory were playgrounds (45.5%) and baseball and softball fields and parks (36.4%). Swimming pools (72.7%) and parks (54.5%) received top priority for construction or renovation, while basketball/volleyball courts, recreational bikeways, hiking-walking trails, and motorcycle trail areas (27.3%) headed the list of no priority items. A profile of this data for the community of Geraldine is presented in Table 13.

Hysham (pop. 373)

Five residences and seven residents responded to the survey from Hysham. This is a return of 12.5% and represents 1.9% of the population. Of the returned questionnaires, one (14.2%) was from within four miles of the city limits, and six (85.8%) were from greater than four miles of the city limits. Six respondents were male and one was female.

No facilities were identified as being used by any of the respondents. The most satisfactory facilities in terms of general condition were softball fields (28.6%) and parks (28.6%). Those perceived as being most unsatisfactory were the swimming pools (28.6%). Parks (28.6%) received top priority for construction or renovation while hiking-walking trails and motorcycle trail areas (28.6%) headed the list of no priority items. A profile of this data for the community of Hysham is presented in Table 14.

Joliet (pop. 412)

Nine residences and twenty-three residents responded to the survey from Joliet. This is a return of 22.5% and represents 5.6% of the population. Of the returned questionnaires, eleven (47.8%) were from within the city limits, three (13.1%) were from within four miles of the city limits, and nine (39.1%) were from greater than four miles of the city limits. Twelve respondents were male and eleven were female.

The most used facilities for this community were swimming pools (232 visits) and open space/athletic fields (126 visits). The most satisfactory facilities in terms of general condition were parks (34.8%) and tennis courts (30.4%). Those perceived as being most unsatisfactory were parks (21.6%) and playgrounds (17.3%). Swimming pools (78.3%), parks and playgrounds, and wading pools (52.2%) received top priority for construction or renovation while motorcycle trail areas (13.0%) headed the list of no priority items. A profile of this data for the community of Joliet is presented in Table 15.

Lima (pop. 351)

Seven residences and thirteen residents responded to the survey from Lima. This is a return of 23.3% and represents 3.7% of the population. Of the returned questionnaires, nine (69.2%) were from within the city limits, and four (30.8%) were from greater than four miles of the city limits. Seven respondents were male and six were female.

The most used facilities for this community were swimming pools (274 visits). The most satisfactory facilities in terms of general condition were swimming pools (46.2%). Those perceived as being the most unsatisfactory were parks (30.8%). Parks and playgrounds (46.2%) received top priority for construction or renovation while recreational bikeways and hiking-walking trails (30.8%) headed the list of no priority items. A profile of this data for the community of Lima is presented in Table 16.

Medicine Lake (pop. 393)

Seven residences and fourteen residents responded to the survey from Medicine Lake. This is a return of 17.5% and represents 3.6% of the population. Of the returned questionnaires, seven (50.0%) were from within the city limits, five (35.7%) were from within four miles of the city limits, and one (7.2%) was from greater than four miles of the city limits. Ten respondents were male and four were female.

The most used facilities for this community were softball fields (24 visits) and parks (18 visits). The most satisfactory facilities in terms of general condition were swimming pools and wading pools (71.4%). Those perceived as being most unsatisfactory were baseball fields (28.5%). Tennis courts (35.7%) received top priority for construction or renovation, while recreational bikeways, hiking-walking trails and motorcycle trail areas (14.3%) headed the list of no priority items. A profile of this data for the community of Medicine Lake is presented in Table 17.

Opheim (pop. 306)

Three residences and eight residents responded to the survey from Opheim. This is a return of 10.0% and represents 2.6% of the population. Of the returned questionnaires, three (37.5%) were from within the city limits, four (50.0%) were from within four miles of the city limits, and one (12.5%) was from greater than four miles of the city limits. Six respondents were male and two were females.

The most used facilities for this community were parks (16 visits). The most satisfactory facilities in terms of general condition were open space/athletic fields and parks (12.5%). Those perceived as being most unsatisfactory were parks (24.5%). Parks (87.5%) and swimming pools (62.5%) received top priority for construction or renovation, while golf courses and motorcycle trail areas (25.0%) headed the list of no priority items. A profile of this data for the community of Opheim is presented in Table 18

Richey (pop. 389)

Five residences and twelve residents responded to the survey from Richey. This is a return of 12.5% and represents 3.1% of the population. Of the returned questionnaires, five (41.7%) were from within the city limits, and seven (58.3%) were from greater than four miles of the city limits. Nine respondents were male and three were females.

The most used facilities for this community were parks (34 visits). The most satisfactory facilities in terms of general condition were parks (58.3%). Those perceived as being most unsatisfactory were basket/volleyball courts (33.3%) and softball fields (25.0%). Parks (58.3%) and motorcycle trail areas (41.7%) received top priority for construction or renovation, while golf courses (16.7%) headed the list of no priority items. A profile of this data for the community of Richey is presented in Table 19.

Saco (pop. 356)

Five residences and seven residents responded to the survey from Saco. This is a return of 16.7% and represents 2% of the population of that community. Of the returned questionnaires, four (57.2%) were from within the city limits and three (42.8%) were from greater than four miles of the city limits. Four respondents were male and three were female.

The most used facilities for this community were parks (10 visits). The most satisfactory facilities in terms of general condition were parks (28.6%). Those perceived as being most unsatisfactory were baseball and softball fields (28.6%); tennis courts, parks, playgrounds, and recreational bikeways (28.6%) received top priority for construction or renovation. A profile of this data for the community of Saco is presented in Table 20.

## COMMUNITIES OF 501-1000 POPULATION

One hundred and fifty-two residences and three hundred and thirty-two residents from twenty-eight communities responded to the survey from this population category, representing a return of 13.0%. Of the returned questionnaires, two hundred and three (61.4%) were from within the city limits, forty-one (12.4%) were from within 4 miles of the city limits, eighty-seven (29.2%) were from greater than four miles of the city limits, and there was one no response.

Swimming pools (987 visits) were the most used facilities for this size community, followed by parks (827 visits), baseball fields (513 visits) and softball fields (469 visits). Top priority for construction or renovation was received by parks (42.2%), playgrounds (35.8%), swimming pools (33.7%), and tennis courts (25.6%). Those areas and facilities receiving the highest no priority response included open space/athletic fields (17.8%), golf courses (17.2%), swimming pools (15.7%), and basket/volleyball courts (15.4%). Parks, baseball and softball fields, swimming pools and playgrounds were perceived as being the most satisfactory as far as the general condition of the facility was concerned. Swimming pools, parks, and playgrounds were perceived as being most unsatisfactory. This summary is presented in Table 21.

TABLE 21

#### Belt (pop. 656)

Three residences and six residents responded to the survey from Belt. This is a return of 7.5% and represents 0.9% of the population. Of the returned questionnaires, six (100%) were from within the city limits. Four respondents were male and two were female.

The most used facilities for this community were open space/athletic facilities (16 visits). The most satisfactory facilities in terms of general condition were openspace/athletic fields (33.3%) and parks (33.3%). Those perceived as being most unsatisfactory were baseball fields, softball fields, swimming pools and playgrounds (66.7%). Basketball/volleyball courts, softball fields, and parks (66.7%) received top priority for construction and renovation. A profile of this data for community of Belt is presented in Table 22.

Big Sandy (pop. 827)

Five residences and ten residents responded to the survey from Big Sandy. This is a return of 10% and represents 1.2% of the population. Of the returned questionnaires, five (50%) were from within the city limits, two (20%) were from within four miles of the city limits, and three (30%) were from greater than four miles of the city limits. Seven respondents were male and three were female.

The most used facilities for this community were golf courses (24 visits). The most satisfactory facilities in terms of general condition were baseball fields (50%). Those perceived as being most unsatisfactory were parks (20%). Parks (50%) received top priority for construction or renovation, while wading pools, baseball and softball fields and playgrounds headed the list of no priority items. A profile of this data for the community of Big Sandy is presented in Table 23.

Bridger (pop. 717)

Three residences and eight residents responded to the survey from Bridger. This is a return of 7.5% and represents 2% of the population. Of the returned questionnaires, six (75%) were from within the city limits, and two (25%) were from greater than four miles of the city limits. Four respondents were male and four were female.

The most used facilities for this community were swimming pools (92 visits) and open space/athletic fields (48 visits). The most satisfactory facilities in terms of general condition were parks and playgrounds (87.5%) and swimming pools (75%). Those perceived as being most unsatisfactory were baseball fields (50%). Baseball fields (62.5%) received top priority for construction or renovation, while eight different facilities headed the list of no priority items. A profile of this data for community of Bridger is presented in Table 24.

Broadus (pop. 799)

Five residences and nine residents responded to the survey from Broadus. This is a return of 12.5% and represents 1.1% of the population. Of the returned questionnaires, four (44.5%) were from within the city limits and five (54.5%) were from within four miles of the city limits. Five respondents were male and four were female.

The most used facilities for this community were golf courses (54 visits) and parks (32 visits). The most satisfactory facilities in terms of general condition were openspace/athletic fields, wading pools and playgrounds (77.8%). Those perceived as being most unsatisfactory were golf courses (77.8%) and swimming pools (33.3%). Parks and playgrounds (33.3%) received top priority for construction or renovation, while basket/volleyball courts, open space/athletic fields, baseball and softball fields (55.6%) headed the list of no priority items. A profile of this data for the community of Broadus is presented in Table 25.

Cascade (pop. 714)

Seven residences and seventeen residents responded to the survey from Cascade. This is a return of 17.5% and represents 2.4% of the population. Of the returned questionnaires, six (35.3%) were from within the city limits and eleven (64.7%) were from greater than four miles of the city limits. Eight respondents were male and nine were female.

The most used facilities for this community was swimming pools (28 visits). The most satisfactory facilities in terms of general condition were playgrounds (41.2%) and parks (41.2%). Those perceived as being most unsatisfactory were swimming pools and parks (11.8%). Tennis courts (17.6%) received top priority for construction or renovation, while basket/volleyball courts (17.6%) headed the list of no priority items. A profile of this data for the community of Cascade is presented in Table 26.

Chester (pop. 936)

Eight residences and eighteen residents responded to the survey from Chester. This is a return of 16% and represents 1.9% of the population. Of the returned questionnaires, fifteen (83.3%) were from within the city limits, and three (16.7%) were from greater than four miles of the city limits. Nine respondents were male and nine were female.

The most used facilities for this community were parks (202 visits). The most satisfactory facilities in terms of general conditions were parks (66.7%), tennis courts (55.6%), and softball fields (55.6%). Those perceived as being most unsatisfactory were parks and playgrounds (16.7%). Parks (50%) received top priority for construction or renovation while openspace/athletic fields (44.4%) headed the list of no priority items. A profile of this data for the community of Chester is presented in Table 27.

Ekalaka (pop. 633)

Three residences and seven residents responded to the survey from Ekalaka. This is a return of 7.5% and represents 1.1% of the population. Of the returned questionnaires, three (42.9%) were from within the city limits and four (57.1%) were from greater than four miles of the city limits. Three respondents were male and four were female.

The most used facilities for this community were parks (28 visits) and swimming pools (20 visits). The most satisfactory facilities in terms of general condition were playgrounds (71.4%). Those perceived as being most unsatisfactory were wading pools and swimming pools (57.1%). Swimming pools (71.4%) received top priority for construction or renovation while seven different facilities (14.3%) headed the list of no priority items. A profile of this data for the community of Ekalaka is presented in Table 31.

Ennis (pop. 501)

Three residences and ten residents responded to the survey from Ennis. This is a return of 10% and represents 20% of the population. All ten (100%) were from within the city limits. Eight respondents were male and two were female.

The most used facilities for this community were openspace/athletic fields (54 visits) and parks (40 visits). The most satisfactory facilities in terms of general condition were parks and playgrounds (100%) and baseball fields (90%). Those perceived as being most unsatisfactory were baseball and softball fields (10%). Hiking-walking trails (60%) received top priority for construction or renovation while open space/athletic fields and playgrounds (60%) headed the list of no priority items. A profile of this data for the community of Ennis is presented in Table 32.

Fairfield (pop. 638)

Four residences and seven residents responded to the survey from Fairfield. This is a return of 10% and represents 1.1% of the population. Of the returned questionnaires, two (28.6%) were from within the city limits and five (71.4%) were from greater than four miles of the city limits. Four respondents were male and three were female.

The most used facilities for this community were parks (28 visits). The most satisfactory facilities in terms of general condition were parks (71.4%). Those perceived as being most unsatisfactory were basket/volleyball courts (14.3%). Playgrounds (42.9%) received top priority for construction or renovation while four separate facilities (14.3%) headed the list of no priority items. A profile of this data for community of Fairfield is presented in Table 33.

Hot Springs (pop. 664)

Three residences and seven residents responded to the survey from Hot Springs. This is a return of 7.5% and represents 1.1% of the population. Of the returned questionnaires, all seven (100%) were from within the city limits. Three respondents were male and four were females.

The most used facilities for this community were hiking-walking trails (45 visits). The most satisfactory facilities in terms of general condition were hiking-walking trails (42.9%). Five different facilities were perceived as being most unsatisfactory. Swimming pools (85.7%) received top priority for construction or renovation, while baseball and softball fields (42.9%) headed the list of no priority items. A profile of this data for the community of Hot Springs is presented in Table 35.

Jordan (pop. 529)

Three residences and three residents responded to the survey from Jordan. This is a return of 10% and represents 0.6% of the population. Of the returned questionnaires, all three (100%) were from within the city limits. One respondent was male and two were female. Due to the small return, the data is of little value and is presented for reference in tabular form only. A profile of this data for the community of Jordan is presented in Table 36.

Lodge Grass (pop. 806)

Six residences and fourteen residents responded to the survey from Lodge Grass. This is a return of 12% and represents 1.7% of the population. Of the returned questionnaires, five (35.7%) were from within the city limits and nine (64.3%) were from greater than four miles of the city limits. Seven respondents were male and seven were female.

The most used facilities for this community were playgrounds (32 visits). The most satisfactory facilities in terms of general condition were parks (42.9%). Those perceived as being most unsatisfactory were parks (7.1%). Playgrounds (57.1%) and parks (50%) received top priority for construction or renovation, while basket/volleyball courts (57.1%) headed the list of no priority items. A profile of this data for community of Lodge Grass is presented in Table 37.

Manhattan (pop. 816)

Four residences and eight residents responded to the survey from Manhattan. This is a return of 10% and represents 1% of the population. Of the returned questionnaires, three (37.5%) were from within the city limits and five (62.5%) were from within four miles of the city limits. Seven respondents were male and one was female.

The most used facilities for this community were playgrounds (86 visits), openspace/athletic fields (75 visits), and baseball fields (71 visits). The most satisfactory facilities in terms of general conditions were baseball fields (75%). Those perceived as being most unsatisfactory were tennis courts (50%). Swimming pools (87.5%), basket/volleyball courts (87.5%) and tennis courts (75%) received top priority for construction or renovation, while golf courses, hiking-walking trails, and softball fields (37.5%) headed the list of no priority items. A profile of this data for the community of Manhattan is presented in Table 38.

Nashua (pop. 513)

One residence and four residents responded to the survey from Nashua. This is a return of 3.3% and represents 0.8% of the population. Of the returned questionnaires, all four (100%) were from within the city limits. Two respondents were male and two were female. Due to the small return, the data is of little value and is presented for reference in tabular form only.

A profile of this data for the community of Nahsua is presented in Table 39.

St. Ignatius (pop. 925)

Four residences and twelve residents responded to the survey from St. Ignatius. This is a return of 8% and represents 1.3% of the population. Of the returned questionnaires, six (50%) were from within the city limits, two (16.7%) were from within four miles of the city limits, and four (33.3%) were from greater than four miles of the city limits. Seven respondents were male and five were female.

The most used facilities for this community were softball fields (44 visits). The most satisfactory facilities in terms of general condition were parks and hiking-walking trails (50%). Those perceived as being most unsatisfactory were softball fields, parks, and playgrounds (16.7%). Swimming pools and parks (50%) received top priority for construction or renovation, while hiking-walking trails and golf courses (25%) headed the list of no priority items. A profile of this data for the community of St. Ignatius is presented in Table 40.

Sheridan (pop. 636)

Seven residences and eleven residents responded to the survey from Sheridan. This is a return of 17.5% and represents 1.7% of the population. Of the returned questionnaires, ten (90.9%) were from within the city limits and one (9.1%) was from within four miles of the city limits. Six respondents were male and five were female.

The most used facilities for this community were swimming pools (141 visits). The most satisfactory facilities in terms of general condition were swimming pools (54.5%) and parks (36.4%). Those perceived as being most unsatisfactory were playgrounds (45.5%). Playgrounds (54.5%) received top priority for construction or renovation, while wading pools (36.4%) headed the list of no priority items. A profile of this data for the community of Sheridan is presented in Table 41.

Stanford (pop. 505)

Six residences and sixteen residents responded to the survey from Stanford. This is a return of 20% and represents 3.2% of the population. Of the returned questionnaires, none were from within the city limits, eight (50%) were from within four miles of the city limits, and eight (50%) were from greater than four miles of the city limits. Seven respondents were male and nine were female.

The most used facilities for this community were swimming pools (49 visits). The most satisfactory facilities in terms of general condition were open space/athletic fields, baseball fields and softball fields (56.3%). Those perceived as being most unsatisfactory were swimming pools (43.8%) and parks (31.3%). Wading pools and swimming pools (62.5%) received top priority for construction or renovation, while golf courses (18.8%) headed the list of no priority items. A profile of this data for the community of Stanford is presented in Table 42.

Big Timber (pop. 1,592)

Three residences and five residents responded to the survey from Big Timber. This is a return of 5% and represents 0.4% of the population of this community. Of the returned questionnaires, all five were from within the city limits. Four residents were male and one was female. Due to the small return, the data is of little value, and is presented for reference in tabular form only. A profile of this data for the community of Big Timber is presented in Table 53.

Boulder (pop. 1,342)

Six residences and sixteen residents responded to the survey from Boulder. This is a return of 12% and represents 1.2% of the population of this community. Of the returned questionnaires, sixteen (100%) were from within the city limits. Nine respondents were male and seven were female.

The most used facilities for this community were swimming pools (102 visits). The most satisfactory facilities in terms of general condition were baseball fields (43.8%). Those perceived as being most unsatisfactory were swimming pools (43.8%). Swimming pools (56.3%) and playgrounds (50%) received top priority for construction or renovation, while hiking-walking trails, motorcycle trail areas, and golf courses (31.3%) headed the list of no priority items. A profile of this data for the community of Boulder is presented in Table 54.

Browning (pop. 1,700)

Three residences and seven residents responded to the survey from Browning. This is a return of 5% and represents 0.4% of the population of this community. Of the returned questionnaires, three (42.9%) were from within four miles of the city limits and four (57.1%) were from greater than four miles of the city limits. Two respondents were male and five were female.

The most used facilities for this community were parks (66 visits). The most satisfactory in terms of general condition were swimming pools and hiking-walking trails (28.6%). Those perceived as being most unsatisfactory were basket/volleyball courts, baseball and softball fields, and swimming pools (28.6%). Basket/volleyball courts, wading pools, and swimming pools (71.4%) received top priority for construction or renovation while recreational bikeways and motorcycle trail areas (42.9%) headed the list of no priority items. A profile of this data for the community of Browning is presented in Table 55.

Columbus (pop. 1,173)

Three residences and five residents responded to the survey from Columbus. This is a return of 7.5% and represents 0.2% of the population. Of the returned questionnaires, three (60.0%) were from within the city limits, and two (40.0%) were from greater than four miles of the city limits. One respondent was male and four were female.

Due to the small return this data is of little value and is presented for reference in tabular form only. A profile of this data for the community of Columbus is presented in Table 59.

Conrad (pop. 2,770)

Seventeen residences and thirty-eight residents responded to the survey from Conrad. This is a return of 17% and represents 1.4% of the population of this community. Of the returned questionnaires, twenty-four (63.2%) were from within the city limits, ten (26.3%) were from within four miles of the city limits, and four (10.5%) were from greater than four miles of the city limits. Twenty respondents were male and eighteen were female.

The most used facilities for this community were swimming pools (208 visits). The most satisfactory facilities in terms of general condition were golf courses (39.5%). Those perceived as being most unsatisfactory were swimming pools (47.4%). Swimming pools (55.3%) also received top priority for construction or renovation while openspace/athletic fields headed the list of no priority items. A profile of this data for the community of Conrad is presented in Table 60.

Cut Bank (pop. 4,004)

Twenty-eight residences and fifty-two residents responded to the survey from Cut Bank. This is a return of 20% and represents 1.3% of the population of this community. Of the returned questionnaires, forty-two (80.8%) were from within the city limits, three (5.4%) were from within four miles of the city limits, and seven (13.5%) were from greater than four miles of the city limits. Twenty-eight respondents were male and twenty-four were female.

The most used facilities for this community were parks (338 visits). The most satisfactory facilities in terms of general condition were swimming pools (73.1%) and parks (67.3%). Those perceived as being most unsatisfactory were tennis courts (34.4%). Recreational bikeways (44.2%) received top priority for construction or renovation while swimming pools (38.5%) headed the list of no priority items. A profile of this data for the community of Cut Bank is presented in Table 61.

Dillon (pop. 4,548)

Thirty-one residences and fifty-seven residents responded to the survey from Dillon. This is a return of 19.4% and represents 1.3% of the population of this community. Of the returned questionnaires, thirty-six (63.1%) were from within the city limits, fourteen (24.6%) were from within four miles of the city limits, and seven (12.3%) were from greater than four miles of the city limits. Twenty-eight respondents were male and twenty-nine were female.

The most used facilities for this community were parks (232 visits) and tennis courts (219 visits). The most satisfactory facilities in terms of general condition were parks and playgrounds (54.4%). Those perceived as being most unsatisfactory were swimming pools (21.1%). Swimming pools (59.6%) also received top priority for construction or renovation, while openspace/athletic fields and baseball fields (24.6%) headed the list of no priority items. A profile of this data for the community of Dillon is presented in Table 63.

East Helena (pop. 1,651)

Seven residences and twelve residents responded to the survey from East Helena. This is a return of 11.7% and represents 0.7% of the population of this community. Of the returned questionnaires, ten (83.3%) were from within the city limits and two (16.7%) were from within four miles of the city limits. Six respondents were male and six were female.

The most used facilities for this community were parks (57 visits). The most satisfactory facilities in terms of general condition were parks (58.3%) and swimming pools (50%). Those perceived as being most unsatisfactory were basket/volleyball courts (16.6%). Tennis courts (33.3%) received top priority for construction or renovation while seven different facilities headed the list of no priority items. A profile of this data for the community of East Helena is presented in Table 64.

Eureka (pop. 1,195)

Eight residences and eighteen residents responded to the survey from Eureka. This is a return of 20% and represents 1.5% of the population of this community. Of the returned questionnaires, fourteen (77.8%) were from within the city limits and four (22.2%) were from greater than four miles of the city limits. Eleven respondents were male and seven were female.

The most used facilities for this community were openspace/athletic fields (52 visits). The most satisfactory facilities in terms of general condition were parks (72.2%). Those perceived as being most unsatisfactory were basket/volleyball courts (38.9%). Softball fields (6.1%) and swimming pools, playgrounds and parks (55.6%) received top priority for construction or renovation, while recreational bikeways (27.8%) headed the list of no priority items. A profile of this data for the community of Eureka is presented in Table 65.

Glasgow (pop. 4,700)

Twenty-one residences and forty-six residents responded to the survey from Glasgow. This is a return of 13.1% and represents 1% of the population of this community. Of the returned questionnaires, thirty-six (78.3%) were from within the city limits, nine (19.6%) were from within four miles of the city limits, and one (2.1%) was from greater than four miles of the city limits. Twenty-eight respondents were male and eighteen were female.

The most used facilities for this community were parks (353 visits). The most satisfactory facilities in terms of general condition were swimming pools (58.7%). Those perceived as being most unsatisfactory were tennis courts (28.3%). Parks (41.3%) received top priority for construction or renovation, while swimming pools (30.4%) headed the list of no priority items. A profile of this data for the community of Glasgow is presented in Table 68.

Hamilton (pop. 2,499)

Five residences and nine residents responded to the survey from Hamilton. This is a return of 5.6% and represents 0.4% of the population of this community. Of the returned questionnaires, eight (88.8%) were from within the city limits. There was one no response to this question. Three respondents were male and six were female.

The most used facilities for this community were parks (10 visits). The most satisfactory facilities in terms of general condition were parks, basket/volleyball courts, and motorcycle trail areas (12.5%). Those perceived as being most unsatisfactory were swimming pools (12.5%). A profile of this data for the community of Hamilton is presented in Table 69.

Harlem (pop. 1,094)

Three residences and eight residents responded to the survey from Harlem. This is a return of 7.5% and represents 0.7% of the population of the community. Of the returned questionnaires, four (50%) were from within the city limits and four (50%) were from greater than four miles of the city limits. Five respondents were male and three were female.

The most used facilities for this community were openspace/athletic fields (25 visits). The most satisfactory facilities in terms of general condition were openspace/athletic fields (37.5%). Those perceived as being most unsatisfactory were swimming pools and parks (55%). Tennis courts (50%) received top priority for construction or renovation, while golf courses and motorcycle trail areas headed the list of no priority items. A profile of this data for the community of Harlem is presented in Table 70.

Laurel (pop. 4,454)

Fourteen residences and thirty residents responded to the survey from Laurel. This is a return of 9.3% and represents 0.6% of the population of the community. Of the returned questionnaires, twenty(66.7%) were from within the city limits, eight (26.7%) were from within four miles of the city limits, and two (6.6%) were from greater than four miles of the city limits. Fourteen respondents were male and sixteen were female.

The most used facilities for this community were swimming pools (199 visits) and parks (156 visits). The most satisfactory facilities in terms of general condition were parks (50%). Those perceived as being most unsatisfactory were swimming pools (60%). Swimming pools (63.3%) also received top priority for construction or renovation while openspace/athletic fields headed the list of no priority items. A profile of this data for the community of Laurel is presented in Table 73.

Libby (pop. 3,286)

One residence and two residents responded to the survey from Libby. This is a return of 0.9% and represents 0.1% of the population of this community. Due to the small response, the data is of little value and is presented for reference in tabular form only. A profile of this data for the community of Libby is presented in Table 74.

Malta (pop. 2,195)

Sixteen residences and thirty-two residents responded to the survey from Malta. This is a return of 20% and represents 1.5% of the population of this community. Of the returned questionnaires, twenty-six (81.2%) were from within the city limits and six (18.8%) were from within four miles of the city limits. Nineteen respondents were male and thirteen were female.

The most used facilities for this community were swimming pools (267 visits). The most satisfactory facilities in terms of general condition were parks (75%). Those perceived as being most unsatisfactory were swimming pools (53.2%). Swimming pools (53.1%) also received top priority for construction or renovation, while basket/volleyball courts headed the list of no priority items. A profile of this data for the community of Malta is presented in Table 75.

Plains (pop. 1,046)

Seven residences and nineteen residents responded to the survey from Plains. This is a return of 17.5% and represents 1.8% of the population of the community. Of the returned questionnaires, fifteen (79%) were from within the city limits, two (10.5%) were from within four miles of the city limits, and two (10.5%) were from greater than four miles of the city limits. Ten respondents were male and nine were female.

The most used facilities for this community were hiking-walking trails (59 visits). The most satisfactory facilities in terms of general condition were parks (68.4%). Those perceived as being most unsatisfactory were wading pools (47.4%). Wading pools and swimming pools (63.2%) received top priority for construction or renovation while recreational bikeways (31.6%) headed the list of no priority items. A profile of this data for the community of Plains is presented in Table 77.

Polson (pop. 2,464)

Eleven residences and twenty-two residents responded to the survey from Polson. This is a return of 12.2% and represents 0.9% of the population of this community. Of the returned questionnaires, eleven (50%) were from within the city limits, six (27.3%) were from within four miles of the city limits, and five (22.7%) were from greater than four miles of the city limits. Eleven respondents were male and eleven were female.

The most used facilities for this community were swimming pools (142 visits). The most satisfactory facilities in terms of general conditions were parks (45.5%). Those perceived as being most unsatisfactory were swimming pools, playgrounds, and golf courses (13.6%). Swimming pools (18.2%) received top priority for construction or renovation while parks (40.9%) headed the list of no priority items. A profile of this data for the community of Polson is presented in Table 79.

Red Lodge (pop. 1,844)

Eight residences and eleven residents responded to the survey from Red Lodge. This is a return of 11.4% and represents 0.6% of the population of this community. Of the returned questionnaires, nine (81.8%) were from within the city limits, one (9.1%) was from within four miles of the city limits, and one (9.1%) was from greater than four miles of the city limits. Seven respondents were male and four were female.

The most used facilities for this community were golf courses (24 visits). The most satisfactory facilities in terms of general condition were openspace/athletic fields, baseball fields, parks, and golf courses (36.4%). Those perceived as being most unsatisfactory were golf courses (27.3%). Swimming pools (63.6%) received top priority for construction or renovation, while motorcycle trail areas (27.3%) headed the list of no priority items. A profile of this data for the community of Red Lodge is provided in Table 81.

Ronan (pop. 1,347)

Eight residences and thirteen residents responded to the survey from Ronan. This is a return of 11.4% and represents 1.0% of the population of this community. Of the returned questionnaires, nine (69.2%) were from within the city limits, and four (30.8%) were from within four miles of the city limits. Nine respondents were male and four were female.

The most used facilities for this community were parks (34 visits). The most satisfactory facilities in terms of general condition were parks (38.5%). Those perceived as being most unsatisfactory were tennis courts (23.1%) and recreational bikeways (23.1%). Swimming pools, parks and recreational bikeways (46.2%) received top priority for construction or renovation while golf courses (23.1%) headed the list of no priority items. A profile of this data for the community of Ronan is presented in Table 82.

Sidney (pop. 4,543)

Twenty-seven residences and sixty residents responded to the survey from Sidney. This is a return of 16.9% and represents 1.3% of the population of this community. Of the returned questionnaires, fifty (83.3%) were from within the city limits, and ten (16.7%) were from within four miles of the city limits. Thirty-two respondents were male and twenty-eight were female.

The most used facilities for this community were parks (474 visits) and swimming pools (432 visits). The most satisfactory facilities in terms of general condition were parks (60.0%) and playgrounds (51.7%). Those perceived as being most unsatisfactory were swimming pools (48.4%). Swimming pools (60.0%) received top priority for construction or renovation, while basket/volleyball courts and openspace/athletic fields (23.3%) headed the list of no priority items. A profile of this data for the community of Sidney is presented in Table 86.

Thompson Falls (pop. 1,356)

Five residences and thirteen residents responded to the survey from Thompson Falls. This is a return of 10.0% and represents 1.0% of the population of this community. Of the returned questionnaires, eleven (84.6%) were from within the city limits, and two (15.4%) were from within four miles of the city limits. Seven respondents were male and six were female.

The most used facilities for this community were swimming pools (189 visits). The most satisfactory facilities in terms of general condition were golf courses (61.5%) and parks (53.8%) and hiking-walking trails (53.8%). Those perceived as being most unsatisfactory were swimming pools (92.4%). Swimming pools (100.0%) and wading pools (61.5%) received top priority for construction or renovation, while motorcycle trail areas (30.8%) headed the list of no priority items. A profile of this data for the community of Thompson Falls is presented in Table 87.

Troy (pop. 1,046)

Four residences and eight residents responded to the survey from Troy representing a return of 10.0% and represents 0.8% of the population of this community. Of the returned questionnaires, five (62.5%) were from within four miles of the city limits, and three (37.5%) were from greater than four miles of the city limits.

The most used facilities for this community were motorcycle trail areas (44 visits). The most satisfactory facilities in terms of general condition were openspace/athletic fields, baseball and softball fields, parks, hiking-walking trails and motorcycle trail areas (50.0%). Those perceived as being most unsatisfactory were basket/volleyball courts, parks, and hiking-walking trails (25.0%). Swimming pools (75.0%) received top priority for construction or renovation, while hiking-walking trails (37.5%) headed the list of no priority items. A profile of this data for the community of Troy is presented in Table 90.

Walkerville (pop. 1,097)

Three residences and eight residents responded to the survey from Walkerville. This is a return of 7.5% and represents 0.7% of the population of this community. Of the returned questionnaires, four (50.0%) were from within the city limits, and four (50.0%) were from within four miles of the city limits. Four respondents were male and four were female.

The most used facilities for this community were motorcycle trail areas (126 visits). The most satisfactory facilities in terms of general condition were motorcycle trail areas (75.0%). Those perceived as being most unsatisfactory were parks (37.5%). Swimming pools, recreational bikeways, and motorcycle trail areas (75.0%) received top priority for construction or renovation, while basket/volleyball courts, openspace/athletic fields, tennis courts, and baseball and softball fields (25.0%) headed the list of no priority items. A profile of this data for the community of Walkerville is presented in Table 91.

Wolf Point (pop. 3,095)

Fifteen residences and twenty-five residents responded to the survey from Wolf Point. This is a return of 13.6% and represents 0.8% of the population of this community. Of the returned questionnaires, twenty (80.0%) were from within the city limits, three (12.0%) were from within four miles of the city limits, and two (8.0%) were from greater than four miles of the city limits. Fourteen respondents were male and eleven were female.

The most used facilities for this community were parks (42 visits). The most satisfactory facilities in terms of general condition were baseball fields (40.0%). Those perceived as being most unsatisfactory were basketball/volleyball courts and parks (20.0%). Tennis courts (28.0%) received top priority for construction or renovation, while wading pools (20.0%) headed the list of no priority items. A profile of this data for the community of Wolf Point is presented in Table 96.

#### COMMUNITIES OF 5,001 - 10,000 POPULATION

Eighty-six residences and one hundred and seventy-eight residents from five communities responded to the survey from this population category representing a return of 13.0%. Of the returned questionnaires, one hundred and twenty-four (69.6%) were from within the city limits, thirty-seven (20.8%) were from within four miles of the city limits, and seventeen (9.6%) were from greater than four miles of the city limits. Ninety-nine respondents were male and seventy-nine were female.

The most used facilities for this size community were parks (983 visits), swimming pools (692 visits), motorcycle trail areas (401 visits), and softball fields (692 visits). Least used facilities included recreational bikeways (65 visits), wading pools (69 visits) and golf courses (127 visits). The most satisfactory facilities in terms of general condition were parks (62.9%), baseball fields (50.6%), softball fields (45.5%), and playgrounds (43.3%). Those perceived as being most unsatisfactory were swimming pools (23.5%) and tennis courts (14.7%). Swimming pools (45.5%), recreational bikeways (36.0%), and playgrounds (32.0%) received top priority for construction or renovation. Baseball fields (19.1%) and openspace/athletic fields (18.0%) headed the list of no priority items. A profile of this population category is presented in Table 97.

Individual communities within this population category have been treated in a similar manner on the following pages. They are represented in alphabetical order and include :

1. Anaconda
2. Glendive
3. Lewistown
4. Livingston
5. Miles City

Anaconda (pop. 9,771)

Nineteen residences and thirty-two residents responded to the survey from Anaconda. This is a return of 11.2% and represents 0.5% of the population of this community. Of the returned questionnaires, twenty-three (71.9%) were from within the city limits, eight (25.0%) were from within four miles of the city limits, one (3.1%) were from greater than four miles of the city limits. Twenty-one respondents were male and eleven were female.

The most used facilities for this community were parks (279 visits). The most satisfactory facilities in terms of general condition were baseball fields (59.4%) and parks (56.3%). Those perceived as being most unsatisfactory were tennis courts (25.1%). Swimming pools (56.3%) and recreational bikeways (50.0%) received top priority for construction or renovation while basketball/volleyball courts and softball fields (25.0%) headed the list of no priority items. A profile of this data for the community of Anaconda is presented in Table 98.

Glendive (pop. 6,305)

Fourteen residences and thirty-three residents responded to the survey from Glendive. This is a return of 12.7% and represents 0.5% of the population of this community. Of the returned questionnaires, ten (30.3%) were from within the city limits, nineteen (57.6%) were from within four miles of the city limits, and four (12.1%) were from greater than four miles of the city limits. Sixteen respondents were male and seventeen were female.

The most used facilities for this community were swimming pools (217 visits) and parks (127 visits). The most satisfactory facilities in terms of general condition were parks (72.7%), baseball fields (66.7%), and softball fields (63.6%). Those perceived as being most unsatisfactory were swimming pools (21.2%). Swimming pools (54.5%) received top priority for construction or renovation, while softball fields (27.3%) headed the list of no priority items. A profile of this data for the community of Glendive is presented in Table 99.

Lewistown (pop. 6,437)

Twenty-one residences and thirty-eight residents responded to the survey from Lewistown. This is a return of 19.1% and represents 0.6% of the population of this community. Of the returned questionnaires, thirty (78.9%) were from within the city limits, and six (15.8%) were from greater than four miles of the city limits. Eighteen respondents were male and twenty were female.

The most used facilities for this community were softball fields (214 visits) and parks (155 visits). The most satisfactory facilities in terms of general condition were parks (60.5%). Those perceived as being most unsatisfactory were tennis courts (21.1%). Recreational bikeways (39.5%) received top priority for construction or renovation, while swimming pools and baseball fields (31.6%) headed the list of no priority items. A profile of this data for the community of Lewistown is presented in Table 100.

Livingston (pop. 6,883)

Fourteen residences and thirty-two residents responded to the survey from Livingston. This is a return of 11.7% and represents 0.5% of the population of this community. Of the returned questionnaires, twenty-eight (87.5%) were from within the city limits, and four (12.5%) were from within four miles of the city limits. Eighteen respondents were male and fourteen were female.

The most used facilities for this community were parks (121 visits) and hiking-walking trails (102 visits). The most satisfactory facilities in terms of general condition were parks (62.5%), playgrounds (53.1%). Those perceived as being most unsatisfactory were parks (25.0%), swimming pools (21.9%) and wading pools (21.8%). Swimming pools, parks and recreational bikeways (46.9%) received top priority for construction or renovation, while golf courses (15.6%) headed the list of no priority items. A profile of this data for the community of Livingston is presented in Table 101.

Miles City (pop. 9,023)

Eighteen residences and forty-three residents responded to the survey from Miles City. This is a return of 12.0% and represents 0.5% of the population of this community. Of the questionnaires returned, thirty-three (76.7%) were from within the city limits, four (9.3%) were from within four miles of the city limits, and six (14.0%) were from greater than four miles of the city limits. Twenty-six respondents were male and seventeen were female.

The most used facilities for this size community were motorcycle trail areas (319 visits), parks (301 visits) and swimming pools (284 visits). The most satisfactory facilities in terms of general condition were parks (62.8%) and baseball fields (51.2%). Those perceived as being most unsatisfactory were swimming pools (41.9%). Swimming pools (62.8%) received top priority for construction or renovation, while softball fields (11.6%) headed the list of no priority items. A profile of this data for the community of Miles City is presented in Table 102.

COMMUNITIES OF 10,001 - 20,000 POPULATION

Eighty-three residences and one hundred and seventy residents from three communities responded to the survey from this population category representing a return of 15.7%. Of the returned questionnaires, one hundred and twenty (70.6%) were from within the city limits, thirty-three (19.4%) were from within four miles of the city limits, and seventeen (10.0%) were from greater than four miles of the city limits. Eighty-eight respondents were male and eighty-two were female.

The most used facilities for this size community were parks (995 visits), tennis courts (453 visits), playgrounds (340 visits), and swimming pools (319 visits). Least used facilities included wading pools (6 visits), basketball/volleyball courts (77 visits) and recreational bikeways (85 visits). The most satisfactory facilities in terms of general condition were parks (50.6%), softball fields (30.6%) and baseball fields (30.0%). Those perceived as being most unsatisfactory were tennis courts and swimming pools. Swimming pools (54.7%), parks (42.9%) and playgrounds (40.6%) received top priority for construction or renovation. Baseball fields and golf courses (22.9%) headed the list of no priority items. A summary of this data is presented in Table 103.

Individual communities within this population category have been treated in a similar manner on the following pages. They are presented in alphabetical order and include:

1. Bozeman
2. Havre
3. Kalispell

Bozeman (pop. 18,670)

Thirty-nine residences and eighty-two residents responded to the survey from Bozeman. This is a return of 15.6% and represents 0.4% of the population of this community. Of the returned questionnaires, seventy-two (87.8%) were from within the city limits, seven (8.5%) were from within four miles of the city limits, and three (3.7%) were from greater than four miles of the city limits. Forty-three respondents were male and thirty-nine were female.

The most used facilities for this community were parks (570 visits). The most satisfactory facilities in terms of general condition were parks (42.7%). Those perceived as being most unsatisfactory were tennis courts (25.6%). Swimming pools (61.0%) received top priority for construction or renovation, while baseball fields and motorcycle trail areas (20.7%) headed the list of no priority items. A profile of this data for the community of Bozeman is presented in Table 104.

Havre (pop. 10,558)

Twenty-four residences and forty-nine residents responded to the survey from Havre. This is a return of 17.1% and represents 0.5% of the population of this community. Of the returned questionnaires, twenty-nine (59.2%) were from within the city limits, seven (14.3%) were from within four miles of the city limits, and thirteen (26.5%) were from greater than four miles of the city limits. Twenty-four respondents were male and twenty-five were female.

The most used facilities for this community were parks (237 visits). The most satisfactory facilities in terms of general condition were parks (61.2%). Those perceived as being most unsatisfactory were tennis courts (34.6%). Swimming pools (71.4%) received top priority for construction or renovation, while baseball fields (32.7%) headed the list of no priority items. A profile of this data for the community of Havre is presented in Table 105.

Kalispell (pop. 10,526)

Twenty residences and thirty-nine residents responded to the survey from Kalispell. This is a return of 14.3% and represents 0.4% of the population of this community. Of the returned questionnaires, nineteen (48.7%) were from within the city limits, nineteen (48.7%) were from within four miles of the city limits, and one (2.6%) was from greater than four miles of the city limits. Twenty-one respondents were male and eighteen were female.

The most used facilities for this community were parks (188 visits). The most satisfactory facilities in terms of general condition also were parks (53.8%). Those perceived as being most unsatisfactory were parks (21.0%). Playgrounds (41.0%) received top priority for construction or renovation, while golf courses (30.8%) headed the list of no priority items. A profile of this data for the community of Kalispell is presented in Table 106.

COMMUNITIES OF 20,001 - 50,000 POPULATION

One hundred and four residences and one hundred and ninety-two residents from three communities responded to the survey from this population category, representing a return of 13.7%. Of the returned questionnaires, one hundred and thirty-one (68.2%) were from within the city limits, fifty-one (27.0%) were from within four miles of the city limits, and ten (4.8%) were from greater than four miles of the city limits. One hundred and eleven respondents were males and eighty-one were females.

The most used facilities for this size community were parks (1,096 visits), golf courses (579 visits), hiking-walking trails (573 visits) and swimming pools (560 visits). Least used facilities include baseball fields (80 visits), wading pools (83 visits) and basketball/volleyball courts (189 visits). The most satisfactory facilities in terms of general condition were parks (41.1%), openspace/athletic fields (31.8%), hiking-walking trails (30.7%) and baseball fields (28.6%). Those perceived as being most unsatisfactory were tennis courts (28.7%). Parks (51.6%), recreational bikeways (45.8%) and playgrounds (43.8%) received top priority for construction or renovation. Motorcycle trail areas (21.9%) headed the list of no priority items. A profile of this data is presented in Table 107.

Individual communities within this population category have been treated in a similar manner on the following pages. They are presented in alphabetical order and include:

1. Butte
2. Helena
3. Missoula

Butte (pop. 23,368)

Twenty-five residences and fifty residents responded to the survey from Butte. This is a return of 10.4% and represents 0.2% of the population of this community. Of the returned questionnaires, twenty-nine (58%) were from within the city limits, eighteen (36%) were from within four miles of the city limits, and three (6%) were from greater than four miles of the city limits. Thirty respondents were male and twenty were female.

The most used facilities for this community were tennis courts and golf courses (186 visits). The most satisfactory facilities in terms of general condition were baseball fields and swimming pools (28%). Those perceived as being most unsatisfactory were tennis courts (28%). Parks (58%) received top priority for construction or renovation while swimming pools (22%) headed the list of no priority items. A profile of this data for the community of Butte is presented in Table 108.

Helena (pop. 22,730)

Forty residences and sixty-six residents responded to the survey from Helena. This is a return of 17.4% and represents 0.3% of the population of this community. Of the returned questionnaires, fifty-nine (89.4%) were from within the city limits, three (4.5%) were from within four miles of the city limits, and four (6.1%) were from greater than four miles of the city limits. Thirty-seven respondents were male and twenty-nine were female.

The most used facilities for this community were parks (402 visits). The most satisfactory facilities in terms of general condition were parks (50%). Those perceived as being most unsatisfactory were tennis courts (33.3%). Parks (48.5%) and recreational bikeways (47%) received top priority for construction or renovation while motorcycle trail areas (27.3%) headed the list of no priority items. A profile of this data for the community of Helena is presented in Table 109.

Missoula (pop. 29,497)

Thirty-nine residences and seventy-six residents responded to the survey from Missoula. This is a return of 13.5% and represents 0.3% of the population of this community. Of the returned questionnaires, forty-three (56.6%) were from within the city limits, thirty (39.5%) were from within four miles of the city limits, and three (3.9%) were from greater than four miles of the city limits. Forty-four respondents were male and thirty-two were female.

The most used facilities for this community were parks (560 visits). The most satisfactory facilities in terms of general condition also were parks (46.1%). Those perceived as being most unsatisfactory were swimming pools (34.2%). Recreational bikeways (51.3%) and parks (50%) received top priority for construction or renovation while motorcycle trail areas (18.4%) headed the list of no priority items. A profile of this data for the community of Missoula is presented in Table 110.

#### COMMUNITIES OF 50,000+ POPULATION

One hundred and twenty-five residences and two hundred and forty-two residents responded to the survey from two cities in this population category, representing a return of 15.1%. Of the returned questionnaires, two hundred and six (85.2%) were from within the city limits, thirty-four (14%) were from within four miles of the city limits, and two (0.8%) were from greater than four miles of the city limits. One hundred and twenty-nine respondents were males and one hundred and thirteen were females.

The most used facilities for this size community were parks (1,600 visits), swimming pools (797 visits), and playgrounds (572 visits). Least used facilities included recreational bikeways (76 visits) and basketball/volleyball courts (128 visits). The most satisfactory facilities in terms of general condition were parks (49.6%), playgrounds (30.6%), swimming pools (24.4%) and openspace/athletic fields (22.3%). Those perceived as being most unsatisfactory were tennis courts (37.2%) and swimming pools (29.7%). Parks (48.3%), swimming pools (45.5%) and playgrounds and recreational bikeways (36.4%) received top priority for construction or renovation. Golf courses (17.4%), and baseball fields (16.9%) headed the list of no priority items. A profile of this population category is summarized in Table 111.

Individual communities within this population category have been treated in a similar manner on the following pages. They are presented in alphabetical order and include:

1. Billings
2. Great Falls

Billings (pop. 61,581)

Fifty-five residences and one hundred and seven residents responded to the survey from Billings. This is a return of 13.3% and represents 0.2% of the population of this community. Of the returned questionnaires, eighty-eight (82.2%) were from within the city limits, nineteen (17.8%) were from within four miles of the city limits. Sixty-one respondents were male and forty-six were female.

The most used facilities for this community were parks (859 visits). The most satisfactory facilities in terms of general condition were parks (57.9%). Those perceived as being most unsatisfactory were tennis courts (34.6%). Parks (43%) received top priority for construction or renovation while baseball fields and motorcycle trail areas (15.9%) headed the list of no priority items. A profile of this data for the community of Billings is presented in Table 112.

Great Falls (pop. 60,091)

Seventy residences and one hundred and thirty-five residents responded to the survey from Great Falls. This is a return of 17.1% and represents 0.2% of the population of this community. Of the returned questionnaires, one hundred and eighteen (87.4%) were from within the city limits, fifteen (11.1%) were from within four miles of the city limits, and two (1.5%) were from greater than four miles of the city limits. Sixty-eight respondents were male and sixty-seven were female.

The most used facilities for this community were parks (741 visits). The most satisfactory facilities in terms of general condition were parks (43.0%). Those perceived as being most unsatisfactory were tennis courts (39.3%). Parks (52.6%) and swimming pools (51.9%) received top priority for construction or renovation, while golf courses (21.5%) headed the list of no priority items. A profile of this data for the community of Great Falls is presented in Table 113.

Communities of 5,001 - 10,000 Population

Two standards were perceived to be more unsatisfactory than satisfactory for this population category. They were recreational bikeways (1/2000 pop.) and motorcycle trail areas (1/community). All others were perceived to be more satisfactory. This perceived relationship between standards and needs for this population category is presented according to percentages of respondents in Table 118.

TABLE 118

Communities of 10,001 - 20,000 Population

The tennis courts standard (1/100 pop.) was perceived to be more unsatisfactory than satisfactory for this population category. Also, the swimming pool standard (1/community) was equally perceived as being both satisfactory and unsatisfactory by the respondents. All others were perceived to be more satisfactory than unsatisfactory. This perceived relationship between standards and needs for this population category is presented according to percentages of respondents in Table 119.

TABLE 119

SUMMARY OF PERCEIVED SATISFACTION  
OF STANDARDS FOR 10,001 - 20,000 POPULATION CATEGORIES

<u>Facility</u>	<u>Response</u>			
	<u>Satis- factory</u>	<u>Unsatis- factory</u>	<u>Don't Know</u>	<u>No Response</u>

Communities of 20,001 - 50,000 Population

Three standards were perceived to be more unsatisfactory than satisfactory for this population category. They were swimming pools (1/community), 9-hole golf courses (1/community), and motorcycle trail areas (1/community). One other standard, swimming pools (1/10,000 additional population) was equally perceived as being both satisfactory and unsatisfactory. All others were perceived to be more satisfactory than unsatisfactory. This perceived relationship between standards and needs for this population category is presented according to percentages of respondents in Table 120.

TABLE 120

SUMMARY OF PERCEIVED SATISFACTION  
OF STANDARDS FOR 20,001 - 50,000 POPULATION CATEGORIES

<u>Facility</u>	<u>Response</u>			
	<u>Satis- factory</u>	<u>Unsatis- factory</u>	<u>Don't Know</u>	<u>No Response</u>
Tennis courts (1/1500 pop.)	29.2%	26.6%	24.0%	20.3%
Softball/baseball fields (1/1000 pop.)	35.4%	16.1%	26.0%	22.4%
Basketball/volleyball courts (1/1500 pop.)	27.1%	18.8%	31.2%	22.9%
Neighborhood parks (1/2000 pop.)	34.4%	22.4%	21.4%	21.9%
Playgrounds (1/2000 pop.)	34.4%	15.6%	28.1%	21.9%
Swimming pools (1/community)	17.7%	44.3%	16.7%	20.8%
Swimming pools (1/10,000 addn. pop.)	28.1%	28.1%	19.8%	24.0%
Picnic areas (1/2000 pop.)	34.9%	22.9%	21.4%	20.8%
Wading pools (1/neighborhood park)	37.5%	15.6%	22.9%	24.0%
Open play space (2 acres/1000 pop.)	37.0%	16.7%	23.4%	22.9%
9-hole golf course (1/community)	19.8%	24.5%	32.3%	23.4%
18-hole golf course (1/2000 pop.)	28.1%	18.8%	31.2%	21.9%
Recreational bikeway (1/2000 pop.)	27.1%	22.4%	27.6%	22.9%
Hiking-walking trails (1/2000 pop.)	32.8%	22.4%	24.0%	20.8%
Motorcycle trail areas (1/community)	18.2%	25.5%	33.9%	22.4%
Ice rinks (1/4000 pop.)	31.2%	23.4%	25.0%	20.3%

Communities of 50,000+ Population

The tennis courts standard (1/1000 pop.) and the swimming pools standard (1/community) were perceived to be more unsatisfactory than satisfactory for this population category. All other standards were perceived to be more satisfactory than unsatisfactory. This perceived relationship between standards and needs for this population category is presented according to percentage of respondents in Table 121.

TABLE 121

SUMMARY OF PERCEIVED SATISFACTION  
OF STANDARDS FOR 50,000+ POPULATION CATEGORIES

<u>Facility</u>	<u>Response</u>			
	<u>Satis- factory</u>	<u>Unsatis- factory</u>	<u>Don't Know</u>	<u>No Response</u>
Tennis courts (1/1500 pop.)	26.0%	30.2%	19.0%	24.8%
Softball/baseball fields (1/1000 pop.)	37.6%	14.0%	21.5%	26.9%
Basketball/volleyball courts (1/1500 pop.)	31.4%	13.6%	27.7%	27.3%
Neighborhood parks (1/2000 pop.)	44.6%	19.8%	13.6%	21.9%
Playgrounds (1/2000 pop.)	37.2%	16.9%	18.2%	27.7%
Swimming pools (1/community)	24.0%	36.4%	12.8%	26.9%
Swimming pools (1/10,000 addn. pop.)	31.8%	28.9%	12.8%	26.4%
Picnic areas (1/2000 pop.)	46.3%	19.4%	12.8%	21.5%
Wading pools (1/neighborhood park)	43.8%	10.7%	18.2%	27.3%
Open play space (2 acres/1000 pop.)	38.4%	11.2%	20.7%	29.8%
9-hole golf course (1/community)	26.9%	14.5%	25.6%	33.1%
18-hole golf course (1/2000 pop.)	31.4%	12.0%	28.5%	28.1%
Recreational bikeway (1/2000 pop.)	26.4%	18.2%	28.1%	27.3%
Hiking-walking trails (1/2000 pop.)	32.2%	12.4%	26.9%	28.5%
Motorcycle trail areas (1/community)	19.4%	16.1%	35.5%	28.9%
Ice rinks (1/4000 pop.)	33.9%	17.8%	18.2%	30.2%

Specific Facilities

Standards for sixteen areas and facilities have been identified separately for comparison among the individual population categories. They are presented in percentage tables according to how the respondents perceived the individual standards.

Tennis Courts (1/1500 pop.)

The tennis courts standard was perceived to be more satisfactory than unsatisfactory in the smaller population categories but more unsatisfactory in two of the larger population categories. This comparison is presented in Table 122.

TABLE 122

## PERCEPTION OF TENNIS COURTS STANDARD

Population Category	Satisfactory	Unsatisfactory	Don't Know	No Response
300-500	41.2%	9.8%	17.5%	31.4%
501 - 1,000	46.4%	16.9%	9.9%	26.8%
1,001 - 5,000	43.2%	20.4%	11.9%	24.5%
5,001 - 10,000	40.4%	20.8%	16.9%	21.9%
10,001 - 20,000	26.5%	27.8%	25.3%	20.0%
20,001 - 50,000	29.2%	26.6%	24.0%	20.3%
50,000+	26.0%	30.2%	19.0%	24.8%
Statewide	39.0%	21.1%	15.3%	24.6%

Softball/Baseball Fields (1/1,000 pop.)

The softball/baseball fields standard was perceived to be more satisfactory than unsatisfactory in all population categories. This comparison is presented in Table 123.

TABLE 123

## PERCEPTION OF SOFTBALL/BASEBALL FIELDS STANDARD

Population Category	Satisfactory	Unsatisfactory	Don't Know	No Response
300 - 500	46.4%	8.2%	11.9%	33.5%
501 - 1,000	53.9%	10.5%	8.4%	27.1%
1,001 - 5,000	49.1%	12.9%	11.3%	26.7%
5,001 - 10,000	40.4%	19.1%	16.2%	24.2%
10,001 - 20,000	42.2%	12.9%	22.9%	21.8%
20,001 - 50,000	35.4%	16.1%	26.0%	22.4%
50,000+	37.6%	14.0%	21.5%	26.9%
Statewide	46.0%	13.0%	14.6%	26.4%

Basketball/volleyball Courts (1/1,500 pop.)

The basketball/volleyball courts standard was perceived to be more satisfactory than unsatisfactory in all population categories. This comparison is shown in Table 124.

TABLE 124

PERCEPTION OF BASKETBALL/VOLLEYBALL COURTS STANDARD

Population Category	Satisfactory	Unsatisfactory	Don't Know	No Response
300 - 500	42.8%	10.8%	12.9%	33.5%
501 - 1,000	49.4%	15.1%	9.3%	26.2%
1,001 - 5,000	43.0%	16.6%	12.7%	27.7%
5,001 - 10,000	32.0%	21.3%	20.2%	26.4%
10,001 - 20,000	31.8%	18.8%	25.3%	23.5%
20,001 - 50,000	27.1%	18.8%	31.2%	22.9%
50,000+	31.4%	13.6%	27.7%	27.3%
Statewide	39.6%	16.3%	17.0%	27.1%

Neighborhood Parks (1/2,000 pop.)

The neighborhood parks standard was perceived to be more satisfactory than unsatisfactory in all population categories. This comparison is shown in Table 125.

TABLE 125

PERCEPTION OF NEIGHBORHOOD PARKS STANDARD

Population Category	Satisfactory	Unsatisfactory	Don't Know	No Response
300 - 500	41.8%	12.9%	11.3%	34.0%
501 - 1,000	54.2%	11.7%	7.2%	26.8%
1,001 - 5,000	49.0%	15.8%	9.0%	26.2%
5,001 - 10,000	45.5%	18.0%	14.0%	22.5%
10,001 - 20,000	43.5%	21.2%	13.5%	21.8%
20,001 - 50,000	34.4%	22.4%	21.4%	21.9%
50,000+	44.6%	19.8%	13.6%	21.9%
Statewide	46.7%	16.5%	11.2%	25.5%

Playgrounds (1/2,000 pop.)

The playgrounds standard was perceived to be more satisfactory than unsatisfactory in all the population categories. This comparison is presented in Table 126.

TABLE 126

PERCEPTION OF PLAYGROUNDS STANDARD

Population Category	Satisfactory	Unsatisfactory	Don't Know	No Response
300 - 500	39.2%	13.9%	11.9%	35.1%
501 - 1,000	48.8%	17.2%	6.6%	27.4%
1,001 - 5,000	47.4%	15.4%	9.5%	27.7%
5,001 - 10,000	48.3%	16.9%	12.4%	22.5%
50,001 - 20,000	42.4%	18.2%	15.3%	24.1%
20,001 - 50,000	34.4%	15.6%	28.1%	21.9%
50,000+	37.2%	16.9%	18.2%	27.7%
Statewide	44.4%	16.0%	12.5%	27.1%

Swimming Pools (1/community)

The swimming pools standard was perceived to be more satisfactory than unsatisfactory in the smaller population categories but not in the larger communities. This comparison is presented in Table 127.

TABLE 127

PERCEPTION OF SWIMMING POOLS STANDARD

Population Category	Satisfactory	Unsatisfactory	Don't Know	No Response
300 - 500	51.0%	7.7%	11.9%	29.4%
501 - 1,000	57.5%	14.2%	5.4%	22.9%
1,001 - 5,000	46.1%	20.1%	8.2%	25.6%
5,001 - 10,000	46.1%	20.2%	12.9%	20.8%
10,001 - 20,000	31.8%	31.8%	13.5%	22.9%
20,001 - 50,000	17.7%	44.3%	16.7%	20.8%
50,000+	24.0%	36.4%	12.8%	26.9%
Statewide	42.3%	22.9%	10.1%	24.7%

### Swimming Pools (1/10,000 Additional Population)

This swimming pools standard was perceived to be more satisfactory than unsatisfactory in all population categories. This comparison is presented in Table 128.

TABLE 128

#### PERCEPTION OF SWIMMING POOLS STANDARD

Population Category	Satisfactory	Unsatisfactory	Don't Know	No Response
300 - 500	25.8%	12.4%	14.4%	47.7%
501 - 1,000	27.1%	16.6%	12.7%	43.7%
1,001 - 5,000	27.5%	16.7%	13.2%	42.5%
5,001 - 10,000	28.7%	16.3%	16.9%	38.2%
10,001 - 20,000	32.4%	25.3%	14.7%	27.6%
20,001 - 50,000	28.1%	28.1%	19.8%	24.0%
50,000+	31.8%	28.9%	12.8%	26.4%
Statewide	28.3%	19.2%	14.2%	38.3%

### Picnic Areas (1/2,000 pop.)

The picnic areas standard was perceived to be more satisfactory than unsatisfactory in all the population categories. This comparison is presented in Table 129.

TABLE 129

#### PERCEPTION OF PICNIC AREAS STANDARD

Population Category	Satisfactory	Unsatisfactory	Don't Know	No Response
300 - 500	42.8%	13.9%	10.9%	32.5%
501 - 1,000	49.7%	18.7%	6.6%	25.0%
1,001 - 5,000	48.9%	15.2%	8.4%	27.4%
5,001 - 10,000	48.9%	19.1%	11.2%	20.2%
10,001 - 20,000	45.3%	19.4%	12.9%	22.9%
20,001 - 50,000	34.9%	22.9%	21.4%	20.8%
50,000+	46.3%	19.4%	12.8%	21.5%
Statewide	46.7%	17.4%	10.5%	25.3%

Wading Pools (1/Neighborhood Park)

The wading pools standard was perceived to be more satisfactory than unsatisfactory in all population categories. This comparison is presented in Table 130.

TABLE 130

PERCEPTION OF WADING POOLS STANDARD

Population Category	Satisfactory	Unsatisfactory	Don't Know	No Response
300 - 500	45.4%	7.2%	11.9%	35.6%
501 - 1,000	48.8%	10.5%	10.2%	30.4%
1,001 - 5,000	45.4%	13.4%	11.1%	30.1%
5,001 - 10,000	41.0%	14.6%	17.4%	27.0%
10,001 - 20,000	34.7%	20.0%	20.6%	24.7%
20,001 - 50,000	37.5%	15.6%	22.9%	24.0%
50,000+	43.8%	10.7%	18.2%	27.3%
Statewide	43.9%	13.0%	14.0%	29.1%

Open Play Spaces (2 acres/1,000 pop.)

The open play spaces standard was perceived to be more satisfactory than unsatisfactory in all population categories. This comparison is presented in Table 131.

TABLE 131

PERCEPTION OF OPEN PLAY SPACE STANDARD

Population Category	Satisfactory	Unsatisfactory	Don't Know	No Response
300 - 500	42.3%	6.7%	13.9%	37.1%
501 - 1,000	48.8%	10.5%	10.2%	30.4%
1,001 - 5,000	47.4%	10.2%	11.3%	31.0%
5,001 - 10,000	36.5%	11.2%	24.7%	27.5%
10,001 - 20,000	42.4%	13.5%	18.8%	25.3%
20,001 - 50,000	37.0%	16.7%	23.4%	22.9%
50,000+	38.4%	11.2%	20.7%	29.8%
Statewide	44.4%	10.6%	14.9%	30.2%

### Nine-Hole Golf Course (1/Community)

The nine-hole golf courses standard was perceived to be more satisfactory than unsatisfactory in all population categories but 20,001 - 50,000 population. 24.5% of the people in this category expressed dissatisfaction with the standard in comparison to 19.8% in favor of it. This comparison is presented in Table 132.

TABLE 132

#### PERCEPTION OF NINE-HOLE GOLF COURSES STANDARD

Population Category	Satisfactory	Unsatisfactory	Don't Know	No Response
300 - 500	33.5%	9.3%	18.6%	38.7%
501 - 1,000	34.6%	14.5%	18.7%	32.2%
1,001 - 5,000	44.2%	6.5%	19.2%	30.1%
5,001 - 10,000	38.2%	4.6%	30.3%	25.8%
10,001 - 20,000	36.5%	10.6%	26.5%	26.5%
20,001 - 50,000	19.8%	24.5%	32.3%	23.4%
50,000+	26.9%	14.5%	25.6%	33.1%
Statewide	36.9%	10.6%	22.3%	30.3%

### Eighteen-Hole Golf Courses (1/2,000 pop.)

The eighteen-hole golf courses standard was perceived to be more satisfactory than unsatisfactory in all population categories. This comparison is presented in Table 133.

TABLE 133

#### PERCEPTION OF EIGHTEEN-HOLE GOLF COURSES STANDARD

Population Category	Satisfactory	Unsatisfactory	Don't Know	No Response
300 - 500	24.7%	9.3%	21.6%	44.3%
501 - 1,000	24.4%	13.9%	22.3%	39.2%
1,001 - 5,000	30.3%	8.1%	22.5%	39.1%
5,001 - 10,000	28.1%	1.7%	33.1%	37.1%
10,001 - 20,000	35.9%	10.6%	27.1%	25.9%
20,001 - 50,000	28.1%	18.1%	31.2%	21.9%
50,000+	31.4%	12.0%	28.5%	28.1%
Statewide	29.1%	10.1%	25.0%	35.8%

Recreational Bikeways (1/2,000 pop.)

The recreational bikeways standard was perceived as more satisfactory than unsatisfactory by all the population categories. This comparison is presented in Table 134.

TABLE 134

PERCEPTION OF RECREATIONAL BIKEWAYS STANDARD

Population Category	Satisfactory	Unsatisfactory	Don't Know	No Response
300 - 500	28.9%	10.3%	20.1%	40.7%
501 - 1,000	29.8%	16.0%	16.9%	36.7%
1,001 - 5,000	30.9%	16.6%	19.5%	32.9%
5,001 - 10,000	18.5%	22.5%	28.7%	30.3%
10,001 - 20,000	30.0%	18.8%	25.9%	25.3%
20,001 - 50,000	27.1%	22.4%	27.6%	22.9%
50,000+	26.4%	18.2%	28.1%	27.3%
Statewide	28.7%	17.3%	22.0%	31.9%

Hiking-Walking Trails (1/2,000 pop.)

The hiking-walking trails standard was perceived to be more satisfactory than unsatisfactory in all population categories. This comparison is presented in Table 135.

TABLE 135

PERCEPTION OF HIKING-WALKING TRAILS STANDARD

Population Category	Satisfactory	Unsatisfactory	Don't Know	No Response
300 - 500	28.9%	11.3%	18.0%	41.8%
501 - 1,000	35.5%	15.8%	14.1%	35.2%
1,001 - 5,000	34.6%	13.8%	19.4%	32.2%
5,001 - 10,000	27.0%	19.1%	27.0%	27.0%
10,001 - 20,000	40.0%	11.8%	22.9%	25.3%
20,001 - 50,000	32.8%	22.4%	24.0%	20.8%
50,000+	32.2%	12.4%	26.9%	28.5%
Statewide	33.7%	14.6%	20.6%	31.2%

### Motorcycle Trail Areas (1/Community)

The motorcycle trail areas standard was perceived to be more satisfactory than unsatisfactory in five of the seven population categories. It was perceived as more unsatisfactory by the 5,001 - 10,000 population category and by the 20,001 - 50,000 population category. This comparison is presented in Table 136.

TABLE 136

#### PERCEPTION OF MOTORCYCLE TRAIL AREAS STANDARD

Population Category	Satisfactory	Unsatisfactory	Don't Know	No Response
300 - 500	32.0%	8.2%	19.6%	40.2%
501 - 1,000	36.7%	14.2%	15.7%	33.1%
1,001 - 5,000	31.2%	12.9%	22.2%	33.7%
5,001 - 10,000	21.3%	23.0%	29.8%	25.8%
10,001 - 20,000	27.6%	18.2%	30.0%	24.1%
20,001 - 50,000	18.2%	25.5%	33.9%	22.4%
50,001+	19.4%	16.1%	35.5%	28.9%
Statewide	28.7%	15.3%	24.6%	31.3%

### Ice Rinks (1/4,000 pop.)

The ice rinks standard was perceived to be more satisfactory than unsatisfactory in all population categories. This comparison is presented in Table 137.

TABLE 137

#### PERCEPTION OF ICE RINKS STANDARD

Population Category	Satisfactory	Unsatisfactory	Don't Know	No Response
300 - 500	28.4%	13.4%	17.0%	41.2%
501 - 1,000	32.9%	19.6%	7.8%	33.4%
1,001 - 5,000	36.0%	19.8%	13.9%	30.3%
5,001 - 10,000	37.1%	20.2%	16.3%	26.4%
10,001 - 20,000	32.4%	24.7%	19.4%	23.5%
20,001 - 50,000	31.2%	23.4%	25.0%	20.3%
50,000+	33.9%	19.7%	18.2%	30.2%
Statewide	35.0%	19.7%	15.3%	30.0%
